## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 and 21-34. Claims 1-16 and 21-33 are drawn to a charge particle system, classified in class 359, subclass 619. Claim 34 is being grouped together with claims 1-16 and 21-33 because it could be searched together with these claims without creating an undue burden on the examiner.
- II. Claims 17-18, drawn to a method for manufacturing a lens system, classified in class 359, subclass 618.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case with respect to claims 1-16 of group I and group II, the method as claimed can be practiced with another materially different product such as a charged particle system that does not require a magnetic flux, and one that does not require each lens module to constitute a component. With respect to claims 21-33 of group I and group II the method as claimed can be practiced with another and materially different product such as a charged particle system that does not require a magnetic

flux and/or that does not require two openings arranged to form a lens row and the pole piece having an elongated shape.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
